Hitachi Content Platform Environmental Review

Trust Hitachi Vantara to help you stay ahead of potential issues, keep your operations running smoothly, maximize productivity and be your partner in achieving greater efficiency.

Prevent service interruption through in-depth capacity and utilization awareness

IT managers often start out with a single use case for Hitachi Content Platform (HCP), but over time their systems are stretched to the limits with additional use cases. In this world of innovative business, who knows what might be accomplished when technology is pushed to maximize its potential? Without a complete view of the current state, an IT manager can run out of workload or storage capacity without realizing it.

Managing workloads and capacity are key to achieving peak performance levels and ensuring stability and reliability of IT Infrastructure. Data center managers have the important task of ensuring they can properly gauge and keep pace with their organization's needs.
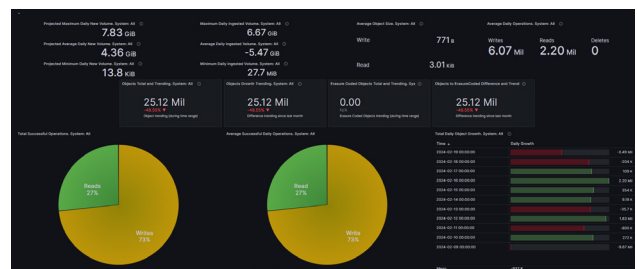

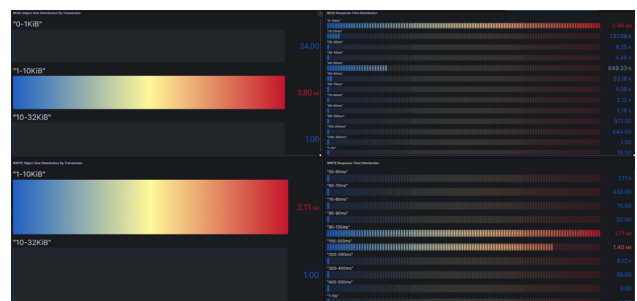

Incomplete planning concerning the HCP platform can cause major interruptions, which is why monitoring capacity usage must be part of every IT leader's strategy. When uncontrolled growth and overutilization cause oversubscription, it can lead to a sudden read-only access that can snowball into a major disruption. Accurately anticipating and meeting capacity demands helps your business to remain efficient and successful.

Anticipate issues before they even arise with HCP Environmental Review

With a 360-degree view of all aspects involved with maintaining best practices, you can make sure your HCP systems can handle the demands put on them.

Hitachi Vantara's comprehensive report gives you an executive summary that makes it easy to understand the health of each system. We connect all these dots and explain trends using data from Hitachi Remote Ops so you will understand all environmental factors and can ensure your workloads stay manageable while maximizing capacity.

Once you get a full view of your HCP environment, you'll have great insight into which areas need tending to for optimal health and performance. Our industry has proven again and again that proactive change based on data-informed decisions saves significant time and cost by preventing reactive support scenarios.

Let us help you achieve greater efficiency and power up your productivity

Your Hitachi Vantara team is available to walk you through every aspect of the report and makes sure you understand what is needed to achieve success.

If you need additional support tailored specifically for your environment and requirements, Hitachi Vantara's individual Enhanced Customer Services offerings can give you an exhaustive understanding of your environment through fresh perspectives from our team's expertise. This guidance helps our customers around the world to unlock a whole new level of technical knowledge and coverage specialized for their unique data center needs.

Whether you need advice, assistance or strategic direction, our enhanced offerings can give you deep and customized expertise that extends your team and adds invaluable insight into your enterprise.

Beat disruption with HCP Environmental Review

The IT infrastructure needs of today's world require exceptional attention to detail. IT managers are often faced with the difficult challenge of piecing together a secure, reliable data center that can support an ever-expanding range of use cases for heavy workloads. Finding creative solutions and staying ahead of tech changes is what makes them true trailblazers in their field.

Let Hitachi Vantara's HCP Environmental Review help you protect your operations from the disruption of an unexpected read-only state. Instead of troubleshooting performance and efficiency issues for hours, you can focus your energy on more productive activities that will help your business grow. Just talk to your account team to get started.

A Robust Efficiency Monitoring Solution for Hitachi Content Platform

HCP Environmental Review shines a light on risk reduction strategies that can help prevent costly recovery operations.

With careful examination by our team of areas of risk, as well as current and future requirements, organizations have an opportunity to sidestep time-consuming and expensive resolutions for environments that aren't fit for purpose.

Take control of your HCP environment with deep and reliable insights:

- Periodically monitor your HCP environment and performance at scale.
- Get expert guidance to keep your equipment running.
- Analyze trends to improve workload and capacity planning of resources.
- Avoid unexpected read-only states that can negatively impact your operations.
- View detailed metrics and history of your environment to make decisions relevant to your business needs.
